

PREMIER INSULATION

License No. 2517147

Polyester Benefits:

- Our Premier polyester insulation is 100% polyester fibres and does not contain any chemicals. The fibres are bonded together by heat to form the structure of the insulation material.
- It won't slump or sag or reduce in performance over time. Insulation that slumps will reduce in performance over time. Insulation thickness is critical to holding in heat – think of a summer vs winter weight duvets on your bed. Premier polyester insulation will stay plump and full for the life of your home.
- Premier polyester is manufactured in NZ; for NZ conditions and employing NZ people
- Polyester insulation is safe to touch, and fibres can't be breathed into your lungs, making it completely safe for you and your family
- The same polyester in our insulation is used in pillows, duvets and in commercial fabrics and clothing for its safety, durability and its 'warmth'
- Our polyester fibre blend uses minimum 45% post-consumer recycled material (PET plastics that have had a life and been recycled into polyester fibres)
- Polyester won't absorb, and is not affected by moisture
- Our Premier Polyester range is independently BRANZ Appraised so you can have confidence in our promises for performance and durability
- Our production facility has been set up to recycle trimmings and off-cuts back into the process so that we generate no landfill waste from our operations. This process is not counted in our "recycled content"
